

CBS ArcSafe™ remote switch operators are used to remotely operate various types and styles of circuit breakers and controls.

CBS ArcSafe™ Remote Switch Operators

With a remote switch operator, a service technician can operate, trip, and close release circuit breakers from a safe distance.

The remote switch operators can be used in conjunction with the CBS ArcSafe remote racking system or independently, as a stand-alone device.

By allowing service personnel to stand outside the arc flash boundary, the CBS ArcSafe remote switch operators reduces the need for a full-body arc flash hazard suit.

The remote switch actuators are held to in place by strong magnets; and no modifications are required to your switchgear. Easily move the remote switch operator from one breaker to another.

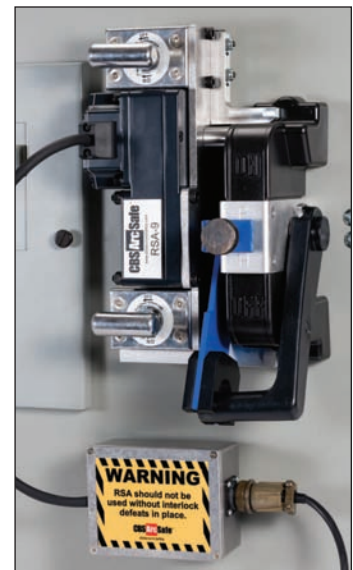

There are several versions of the CBS ArcSafe universal remote switch actuators which enable the system to be used with numerous different types of circuit breakers and motor controls. Each CBS ArcSafe remote switch operator is powered by the Model RSO-1 portable base unit which includes a 24vdc power supply and either a pendant control or radio remote control.
